SAP Analytics Cloud and SAP S/4HANA

# Plan, Analyze, and Execute All in One Financial Management System

THE BEST RUN

**Summary**

Together, SAP S/4HANA® and the SAP® Analytics Cloud solution unify planning, analysis, and execution in one financial management system. Adopting this strategic approach allows you to have best-in-class ERP and planning software together in an integrated experience, allowing you to respond faster to changes and gain strategic business insight.

**Objectives**

- Unify ERP with financial planning and analysis in one integrated solution
- Close the gap between insight and action
- Make changes to your forecast more accurately
- Tell the story behind the numbers with best-in-class visualizations
- Use financial planning and analysis technology with minimal business disruption

**Solution**

- Single source for financial planning and analysis, with live connectivity between plans and actuals
- Faster and more accurate forecasting with machine learning and augmented analytics
- Best-in-class business intelligence, prediction, and planning capabilities all in one system
- Prebuilt content and templates to get a jump-start with best practices

**Benefits**

- Save time and reduce errors with one source of truth for planning and actuals
- Act in the moment with augmented analytics and live insights at your fingertips
- Spend less time on manual transactional work and more on value-added insights
- Enable collaborative enterprise planning by linking plans across the business

For more information on how to bring planning, analysis, and execution together in one place, visit us [online](#).

Success in the rapidly changing digital economy today hinges on the automation of processes and being able to provide strategic business insights in real time.

You can multiply your financial system intelligence by combining the functionality of SAP S/4HANA® with SAP® Analytics Cloud. Implementing this integrated solution at the center of your digital transformation allows you to base planning and actuals on one financial source of truth across the enterprise. Having transactions, analytics, and planning capabilities all in a single unified ERP and analytics backbone helps you close the gap between analysis and action.

Customers using SAP S/4HANA can expect integration of the core features of SAP Analytics

Cloud and live connectivity to their data. You can import data from SAP S/4HANA into SAP Analytics Cloud to help meet business-driven requirements in which data agility is crucial.

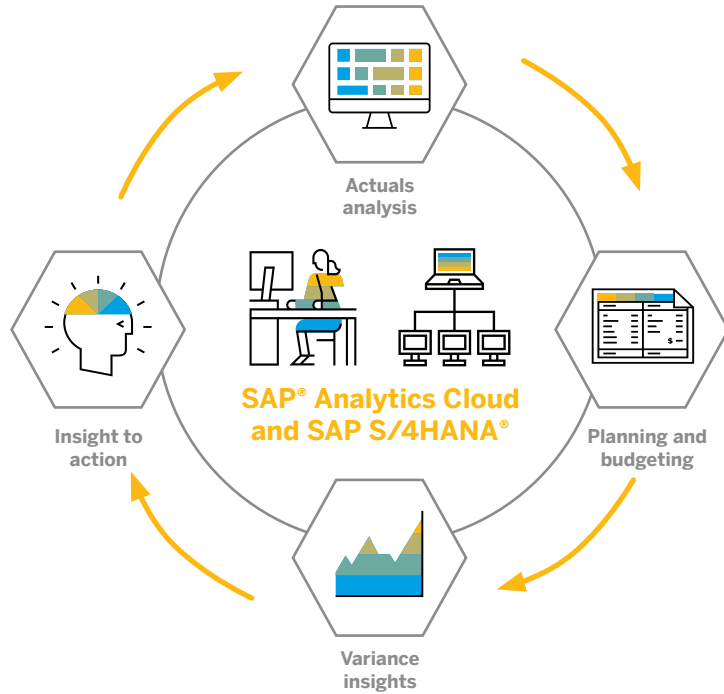

The powerful calculation engine behind the SAP HANA® platform extends advanced planning capabilities to a wide array of new use cases. You can apply machine learning models and predictive planning to data from SAP S/4HANA.

Content and templates built by industry experts will give you financial planning models tied to SAP S/4HANA, including actual-versus-planned report templates, best-practice allocations, and planning-process flows. They will help you plan with confidence and accelerate innovation.

Bring **intelligence** to financial planning, analysis, and execution – all in one place.
